Summary

I work on the evaluation and reliability of AI agents and on open pretraining data for large language models. My work includes Terminal-Bench, a widely used benchmark for command-line agents, and MixtureVitae, an openly licensed pretraining dataset, and has been cited more than 1,000 times.

Education

Northeastern University, Boston, MA — Dec 2026 (expected)
Master of Science in Computer Science — GPA: 3.8/4.0

Delhi Technological University, Delhi, India — August 2023
Bachelor of Technology in Engineering Physics — GPA: 3.4/4.0

Research Experience

Machine Learning Research Intern, Scale AI, New York, NY — May 2026 – Sept 2026
- Studied why AI agents fail on long-horizon tasks. Built a taxonomy that separates errors made by the model from errors caused by the agent harness, and framed root-cause attribution of failures as a search problem.
- *Impact:* Two first-author papers on agent failure taxonomy and root-cause attribution.

Research Engineer Intern, Bespoke Labs, Mountain View, CA — Jan 2026 – Apr 2026
- Built synthetic reinforcement learning environments for training command-line agents. Delivered the environments to frontier AI labs.
- *Impact:* Environments were used to train production CLI coding agents.

Research Assistant, Forschungszentrum Jülich, Jülich, Germany (Remote) — July 2025 – Present
- Led MixtureVitae, building permissively licensed pretraining data for the EU foundation model projects MINERVA, OpenEuroLLM and ELLIOT on the JUPITER supercomputer. Built pipelines for mixing, upsampling, interleaving and quality validation at the scale of hundreds of billions of tokens.
- *Impact:* 10% gain over prior permissive datasets; published in TMLR with a Featured Certification.

Research Assistant, Bau Lab, Northeastern University, Boston, MA — Mar 2025 – Dec 2025
- Studied how pretraining data shapes model behavior and alignment, advised by David Bau and Robert West.
- *Impact:* Co-authored *Synthetic Persona Pretraining*, NeurIPS 2026 AI4Good Workshop.

Research Fellow, AI Risk and Vulnerability Alliance, Remote — Oct 2024 – June 2025
- Contributed bias benchmarks to the UK AI Security Institute's inspect-ai evaluation framework.
- Integrated inspect-ai with the AI Vulnerability Database.

Applied Scientist, Vijil AI, Remote — Jan 2024 – Nov 2024
- Developed vijil-fuzzer, an LLM red-teaming framework with an 85% attack success rate against GPT-4o at launch. Integrated 15+ benchmark datasets into the vijil-evaluate platform and added guardrails to vijil-dome with under 10 ms latency overhead.
- *Impact:* The red-teaming platform is used by enterprise clients including DigitalOcean and Groq.

Grants, Awards and Honors

- TMLR Featured Certification and Journal-to-Conference Certification for MixtureVitae. 2026
- Swiss AI Large Grant, lead applicant: 200,000 GPU hours on the Alps supercomputer and CHF 61,000. 2025
- EuroHPC Access Grant: 4 million GPU hours on the LEONARDO supercomputer. 2024
- Best Paper Award, ML Safety Workshop at NeurIPS 2022, with a $5,000 prize. 2022
- Rank 7, Codeforces Raif ML Round 1. 2021
- 3rd place, R2R Vision-and-Language Navigation leaderboard at submission, team MLR_Lab_DTU. 2024

Professional Service

Reviewer for ICLR 2027, NeurIPS 2026 Datasets and Benchmarks Track, ACL Rolling Review 2026, EvalEval Workshop at ACL 2026, and ICLR 2026.

Media Coverage and Writing

- Harbor and Harbor-Index used for agent evaluation in LangChain's *How We Benchmark Deep Agents*. 2026
- Harbor-Index covered by Capital & Compute in *Harbor-Index: The AI Benchmark Where Nothing Tops 30%*. 2026
- *Model or Harness?* featured by DAIR.AI and alphaXiv. 2026
- Terminal-Bench reported in Anthropic's Claude launches and tracked by Artificial Analysis. 2025–2026
- *Interpreting the Effects of Jailbreak Prompts in LLMs*, LessWrong. 2024

Open-Source Software

- Terminal-Bench: core team member, and reviewer for the next version, Terminal-Bench 4. About 1,000 GitHub stars.
- Harbor: core team member of a framework for running and evaluating agents in containers. Over 6,000 GitHub stars.
- inspect-ai: contributed bias benchmarks to the UK AI Security Institute's evaluation framework. Over 3,000 GitHub stars.
- garak: contributed to NVIDIA's open-source scanner for LLM vulnerabilities. Over 5,000 GitHub stars.
